Form F: Other relevant matters: X changed
□ unchanged (last reporting: yyyy)

Form G: Information to the UN-database on mine clearance: X changed
□ unchanged (last reporting: yyyy)
Form A

Dissemination of information

Article 13, paragraph 4 (a) “The High Contracting Parties shall provide annual reports to the Depositary ... on:

(a) dissemination of information on this Protocol to their armed forces and to the civilian population;”

Remark:

High Contracting Party

Sweden

reporting for time period

from 2007-09-01 to 2008-08-31

Information to the armed forces

The majority of all engineering officers and military legal advisers in the Swedish Armed Forces and some schools, e.g. the Swedish National Defense College, receive information regarding Protocol II as well as the Ottawa Convention. A revision of regulations has been completed.

Information to the civilian population

Sweden is not a mine affected country nor in any way using mines. This Protocol is made public, but no special announcement or campaign has been conducted.
Form B  Mine clearance and rehabilitation programmes

Article 13, paragraph 4 (b)  “The High Contracting Parties shall provide annual reports to the Depositary ... on:

(b) mine clearance and rehabilitation programmes;”

Remark:

High Contracting Party  Sweden  reporting for time period from 2007-09-01 to 2008-08-31

Mine clearance programmes

This item is not applicable for Sweden. For support to international mine action programs see "Form E".

Rehabilitation programmes

This item is not applicable for Sweden. For support/co-operation see "Form E".
Form C Technical requirements and relevant information

Article 13, paragraph 4 (c) “The High Contracting Parties shall provide annual reports to the Depositary ... on:

(c) steps taken to meet technical requirements of this Protocol and any other relevant information pertaining thereto;”

**Remark:**

High Contracting Party Sweden reporting for time period from **2007-09-01** to **2008-08-31**

**Technical requirements**

Sweden complies with all the provisions contained in Articles 1-14 as well as the Technical Annex. The Swedish Parliament decided in 1996 that the Swedish Armed Forces should no longer use anti-personnel landmines. Sweden ratified the Ottawa Convention in 1998. In December 2001 Sweden completed its obligation in accordance with article 3 of the Ottawa Convention with regard to destruction of all anti-personnel landmines.

Several thousand anti-personnel mines were kept for the purpose of training and research in accordance with article 4 of the Ottawa Convention. Some of these mines do not meet the requirements of detectability under article 4 of Protocol II. This, however, is of no practical significance since the use of anti-personnel mines is now prohibited under Swedish legislation.

Anti-personnel mine number 12, which was "an other device" has been modified so that it can only be used if discharged by a soldier and has also been renamed ‘Försvarsladning 21’. This restriction goes actually further than what is specified in article 5, point 6 in Protocol II.

Sweden has not procured international warning signs in accordance with the Technical Annex, section 4. The reason for not doing so is that these signs have not yet been requested in connection with international missions that Sweden has participated in. So far national signs and warning devices in the respective country have been used.

**Any other relevant information**

NIL
Form D  Legislation

Article 13, paragraph 4 (d)  “The High Contracting Parties shall provide annual reports to the Depositary ... on:

(d) legislation related to this Protocol;”

Remark:

| High Contracting Party | Sweden | reporting for time period from | 2007-09-01 to 2008-08-31 |

Legislation

Sweden has not adopted any specific legislation in connection with its accession to the Protocol. The Government bill (prop. 1996/97:145) proposed that Parliament should adopt the Protocol. The Government believed that no amendments to existing legislation were necessary and that the content of Swedish legislation already in force was sufficient for Sweden to fulfil its undertakings under the Protocol.

In this context, a comparison between some central provisions in the Protocol and relevant Swedish legislation should, however, be mentioned. The Protocol stipulates, among other things, that the use of anti-personnel mines which are not detectable is prohibited (art. 4). As for internal conditions, the Swedish Government in December 1996 decided on a government bill which proclaimed a total prohibition of the use of anti-personnel mines in the Swedish armed forces, and that all stockpiled mines should be destroyed prior to the end of the year 2001 (prop. 1996/97:4, bet. 1996/97:FöU01, rskr. 1996/97:109). Through that decision Sweden complies with the demands set up in the Protocol.

In the Protocol, the contracting parties also undertake not to transfer mines (art. 8). Under Swedish legislation there is a general prohibition of the manufacture, transfer or exportation of materials classified as munitions, unless authorization is granted by the relevant authorities, i.e. the national Inspectorate of Strategic Products. The relevant provisions are given in the Military Equipment Act (1992:1300) and the Military Equipment Ordinance (1992:1303). Infringements of these provisions are punishable by law.

The Protocol also stipulates that each contracting party shall take all appropriate steps to prevent and suppress violations of the Protocol. According to Swedish criminal legislation in force (Penal code, Ch. 22, sec. 6) a person guilty of a serious violation of a treaty or agreement with a foreign power or an infraction of a generally recognised principle or tenet relating to international humanitarian law, shall be sentenced for a crime against international law to imprisonment for at most four years or, if the crime is gross, imprisonment for at most ten years or for life. Serious violations shall be understood to include i.e. use of any weapon prohibited by
international law. These provisions are universally punishable under Swedish law. As regards the military use of mines, such acts are therefore seen as crimes against international law. Other uses of mines are punishable according to general criminal law.
Form E

International technical information exchange, cooperation on mine clearance, technical cooperation and assistance

Article 13, paragraph 4 (e) “The High Contracting Parties shall provide annual reports to the Depositary ... on:

(e) measures taken on international technical information exchange, on international cooperation on mine clearance, and on technical cooperation and assistance;”

Remark:

High Contracting Party Sweden reporting for time period from 2007-09-01 to 2008-08-31

International technical information exchange

The Swedish EOD and Demining Center (SWEDEC) is a Swedish Centre of Excellence within EOD and mine clearance under the umbrella of the Swedish Armed Forces (SAF). Among other things, SWEDEC is responsible for participating actively in international efforts and information exchange.

The Swedish Rescue Services Agency (SRSA), the Swedish Armed Forces through SWEDEC and the Swedish Defence Research Agency (FOI) are actively supporting GICHD directly or indirectly in many activities.

The Swedish Armed Forces is responsible for the participation in international efforts, including information exchange, as i.a. in the Balkan and the Baltic States.

At the international level the work at the intersessional standing committees in the framework of the Ottawa Convention is highly valued.

Sweden participates in the International Test and Evaluation Program, ITEP, through SAF and the SRSA. Furthermore, Sweden is involved in the work on standardizing mine action conducted by the EU (CEN), WEU and NATO through Partnership for Peace.

At the Nordic level there are networks between the Defence Research Establishments. Sweden also participates in the activities of the Nordic Demining Research Forum, NDRF.
In co-operation with GICHD Sweden has developed a hand-held survey tool for the UN information-system IMSMA which is based on the Swedish information system EOD IS. As an interface, maXML, has been developed for communication between IMSMA and EOD IS. Partner countries using EOD IS are also sharing information through a special network. Additional information on these matters can be found at www.swedec.mil.se and www.eodis.org.

Sweden has developed a lesson-learned process for EOD, based on NATO standard and a computerized technical tool for support of the process.

Through SRSA, Sweden is involved in research and development of mine clearance equipment which includes mechanical mine clearance equipment, metal detectors and artificial dog noses. Initial tests of the Mine Guzzler, Oracle and Scanjack has been followed up by SWEDEC in the framework of ITEP.

**International co-operation on mine clearance**

Swedish contributions to international humanitarian mine clearance are mainly channelled through the Swedish International Development Co-operation Agency (Sida). Below is an updated list of contributions by international organisations and countries. The list is based on disbursed funds within the reporting period, except when otherwise specified (see * below).

**Total contributions:** 169 005 370
Military and civilian personnel from the Swedish Armed Forces and the Swedish Rescue Services Agency have participated in humanitarian mine action for the UN and for various NGOs, for example in Bosnia, Lebanon, Iraq, Sudan, Sri Lanka, Somalia and Senegal. SRSA Mine Action projects are mainly funded through Sida and the UN.

The SRSA participation in the development of Rapid Response within Mine Action supporting UNMAS reflects the MoU for the SRSA component within Rapid Response Plan. The MoU has been signed with the United Nations Office for Project Services (UNOPS). SRSA has also signed a MoU with the ICRC, to enable support to mine action activities in mine and explosive remnant of war (ERW) contaminated areas.

SRSA conducts a yearly exercise in a Rapid Response Plan scenario where UNMAS has deployed a Mine Action Co-ordination Team (MACT) supported by SRSA to establish a Mine Action Co-ordination Centre (MACC). An international and experienced Programme Manager/Chief Technical Advisor will be chosen by UNMAS and invited to act as the head of the Team through the exercise. The aim of the exercise is to train SRSA staff in working in emergency environment; and for UN to give international staff an opportunity to exercise in future positions. The exercise has also the purpose to validate and improve RRP Operational Manual (including Standard Working Procedures).

Sweden conducts various training courses for personnel who for example will carry out aid work in the future or will be involved in Mine Action. At SWEDEC (Swedish EOD and Demining Centre) there is a special Mine Action support unit.

Swedish Armed Forces can, when so requested, conduct mine clearance to the UN-standard in Mine Action, IMAS.

**International technical co-operation and assistance**

Through the SRSA, Sweden provides personnel with a broad Mine Action expertise in UN Mine Action projects. SRSA is also conducting stand alone Mine Action projects. SRSA has previously been conducting Mine Action projects in: Kosovo, Eritrea, Somalia, DR Congo, Chad, Russia, Sri Lanka, Afghanistan, Sudan and Iraq.

SRSA has during the reporting period been conducting Mine Action projects in Sudan (supporting UNMAS, financed by Sida, specialist support), Lebanon (supporting UNMAS, financed by Sida, 1 EOD team, 3 BAC teams, 1 mechanical team and QA MDD financed by UNOPS), Senegal (supporting UNDP, financed by Sida, specialist support and EOD), Chad (EOD specialist support financed by Sida), Somalia (supporting UNDP, financed by Sida, 3 EOD teams and coordination), Iraq (specialist support to UNDP financed by Sida), Albania (supporting Albanian Mine Action Executive, financed by Sida, EOD), DR Congo (supporting UNMACC-DRC and UNOPS in cooperation with DCA, mechanical and MDD support).
During the period covered by this report, SRSA has conducted Mine Action introduction courses and exercises.

Form F  Other relevant matters
