AMENDED PROTOCOL II

Form A  Dissemination of information

Article 13, paragraph 4 (a)  “The High Contracting Parties shall provide annual reports to the Depositary […] on […]:

(a) dissemination of information on this Protocol to their armed forces and to the civilian population;”

Remark:

High Contracting Party:  THE REPUBLIC OF CROATIA

Reporting for time period from:  01/01/2019 to:  31/12/2019

INFORMATION TO THE ARMED FORCES:
Since Croatia is one of the High Contracting Parties to the Convention on Cluster Munitions, that Convention is added to the curriculum of the Croatian Defence Academy. The introduction of the Convention on Cluster Munitions to the Croatian Armed Forces was used to reshape and expand the curriculum time dedicated at all levels of education on the agreements, treaties and conventions signed and ratified by Croatia. Starting at basic, advance and senior NCO courses it expands and gets more in-depth coverage all the way up to the War College level. The new expanded curriculum is being implemented from the beginning of September 2011 and is being updated all the time.

INFORMATION TO THE CIVILIAN POPULATION:
Dissemination of information about the CCW and its protocols to civilian population is performed through Mine Risk Education (MRE) activities. Croatian Ministries, Offices of the Government and State Administrative Offices as well as NGOs and international organizations, pass specific training according to their role in the national implementation of the Convention and Protocols. Croatian Red Cross with its local branches (in local communities), Civil Protection Directorate (Croatian Mine Action Centre-CROMAC) of the Ministry of the Interior and the Association of Civil Victims of Homeland War are active in events and lectures where MRE messages are given. These lectures always bear in mind that mine risk education is effective in terms of reducing the number of mine casualties. Interesting presentations (lectures) on mine/UXO risk education were organised for children, adults, and for specific target groups (hunters, farmers, firemen, mountaineers, fishermen, public companies employees etc.). Promotion to the public and the media is an especially important way to directly spread safety messages about the dangers of ERW, which seeks to inform as many citizens at the local and national level. Creating and distributing posters, flyers, brochures, etc. and publishing news stories in print and electronic media (radio and TV spots) reaches a significantly larger number of citizens, and further points to the still present danger of landmines in Croatia.

The Croatian Police Department is continuing its "Less arms, less tragedies" program in partnership with UNDP and Croatian Mine Action Centre. The citizens are being educated and encouraged to turn in their
AMENDED PROTOCOL II

weapons and ordinance left from the Homeland War. The Croatian Police Department also reacts on basis of citizen’s telephone calls and finds large quantities of weapons within their investigations of various criminal activities. Realizing the scope of the problem in Croatia, the Police Department is continuing this program in the future.
## AMENDED PROTOCOL II

### MINE CLEARANCE PROGRAMMES:

The Republic of Croatia confirmed its determination to solve the mine problem by passing the Law on Humanitarian Demining in 1996, establishing the Croatian Mine Action Centre in 1998, fulfilling the commitments undertaken by joining the Ottawa Convention as well as providing for permanent and stable sources of financing from the State Budget, the World Bank loans, EU funds and Croatian public companies.

In 2012, the Office for Mine Action was established by the Government of the Republic of Croatia (“Official Gazette”, 21/12) as a governmental body for technical, analytical, advisory, co-ordinating and other activities related to mine action in Croatia. As such, it will also closely follow the activities and work with CROMAC. One of the main goals of the Office is to raise the awareness of population about the danger of mines, as well as to create conditions for effective development of mine action in Croatia. Civil Protection Directorate (Croatian Mine Action Centre) created the Mine Action 2019 Plan with the consent of the Ministry of Interior, Ministry of Finances, Ministry of Defence, Ministry of Maritime Affairs, Transport and Infrastructure, Ministry of Regional Development and EU Funds, Ministry of Culture, Ministry of Environment and Nature Protection, Ministry of Tourism, Ministry of Economy, Ministry of Construction and environmental planning, Ministry of agriculture, Ministry of Business and trade and all mine contaminated Counties in the Republic of Croatia.

Through 57 preliminary demining projects, mine threat has been removed from an area that amounts to 38.8 km² while additional 7 km² was reduced through technical and non-technical survey activities. All these activities resulted in the total decrease of the suspected hazardous area in Croatia in the amount of 45.8 km² (+298.880 m² demined areas directly performed by the MoD). Suspected hazardous area in the Republic of Croatia on December 31, 2019 totalled 309.7 km². (excluding the MoD areas)

In 2019 the largest share in demined areas were the areas planned for different economic activities like forest area and especially agricultural land which the local and regional governments have stated as their priority crucial for start of agricultural production and the other activities. This means that at the end of 2019, 1.1% of the SHA were categorized as agricultural areas, 98.6 % as forest areas and the remaining 0.3% as the other areas (swamp, rocky etc. soils). During the mine clearance activities total number of 8285 mines and UXOs was found and destroyed, out of which, 5279 mines and 3006 UXOs, performed by 44 accredited commercial companies that conducted demining operations.

The Annual Mine Action Plan was realized using the following funding sources - State Budget funds, EU funds and donations. It is important to mention that, like in the previous reporting year, in 2019, funds
acquired for the demining operations from the EU contribution were significant. In 2019 state budget had
the biggest financing share with 60.8% of the realized funds in total (EU funds 38.9%, donations 0.3%).
Parallel with the implementation of the non-technical survey and search and demining operations, the
control of marking and, if necessary, additional marking of suspected hazardous areas was conducted in
order to create a clear boundary between safe and suspected hazardous areas. The locations of mine
danger signs are one of the basic elements of the Mine Information System (MIS) that is shown on the
maps given to the local authorities, police administration and individuals that have requested maps on
SHA situation. On December 31, 2019 the total mine suspected area was marked with 11,540 mine
danger signs, which means slightly over 37 mine warning signs per square kilometre of SHA marking per
square kilometre.

Certain amount of Croatian military facilities including barracks, training areas, radar stations and storage
sites are still partially contaminated by land mines, cluster munitions remnants and other UXO. The
Pioneer battalion of the Engineering regiment is responsible for clearance of all military facilities. During
2019, an area of 298,880 m² was searched and cleared. 12 AP mines and 929 pieces of UXO were
discovered and destroyed; while AV landmines were not found during the process.
The Ministry of the Interior of the Republic of Croatia continued its "Less arms, less tragedies"
Programme in partnership with UNDP throughout which the citizens are being educated and encouraged
to turn in their weapons and ordinance left from the Homeland War. In the same reporting period during
the regular course activities of the EOD team and previously mentioned annual public awareness
campaign the MoI officers collected 103 AP and 38 AV landmines with different 442,578 pieces of
UXO's. This includes Air bombs, Naval bombs, Hand grenades, Cluster bombs, Artillery shells (20 mm
and larger), Mortar shells, SALW ammunition (up to 14.5 mm), explosives such as TNT and other ERW).
This amount was destroyed as well.

REHABILITATION PROGRAMMES:

**Mine/UXO risk education**

Different Mine risk education activities, marking of Mine suspected area, possibility of getting an insight
into mine situation throughout submission of SHA maps as well as using [CROMAC web portal](https://cromac.org) had a
positive effect on the prevention of mine incidents, but also required additional activities of informing the
public and media of different mine action aspects. In addition to usual MRE methods CROMAC with its
partners developed the Minefields.info application for Android and iOS smart phones, to further tackle
and increase the availability of mine warning information towards the general public. The applications
main purpose is to warn the user of a life-threatening danger caused by entering or approaching the
vicinity of SHA. It works on a basis of distance and GPS tracking so if user gets closer to a suspected
hazardous area the application will alert him immediately. The application also has "Call for Help" option
and to report and take a photo of unknown potential ERW, along with a database of known ERW in the
corresponding country, which further provides MRE available through smartphones.

In 2019, the Civil Protection Directorate of the Ministry of the Interior coordinated a large number of
activities related to informing about mine danger. Through 152 lectures and presentations, more than
20,000 citizens were educated in 2019. Majority of them were kindergarten and elementary school kids.
Special education was given to the members of Hunting associations, Croatian mountain rescue service,
hikers, farmers and tourists. Education was provided throughout the 17 Counties and 87 Municipalities.
The largest number of activities related to the education about dangers of mines and UXO were done in
cooperation with the Ministry of Internal Affairs and the relevant police departments through the "Less
arms, less tragedy" campaign. The cooperation was also achieved with City and Municipal governments
and other non-governmental organizations and associations.

All actions and activities in Mine Action in Croatia and worldwide were presented on web pages of the
Civil Protection Directorate of the Ministry of the Interior of the Republic of Croatia.

Central ceremony for the April 4, International day of Mine Awareness and Assistance in Mine Action
was held in the town of Zagreb with the presence of all relevant Mine Action stakeholders demonstrating all of the MRE activities as well (promo leaflets, showcasing ERW, books, mine warning signs, personal protective equipment, etc.). As part of commemorating International Day for Mine Awareness and Assistance in Mine Action, the MoI Civil Protection Directorate has conducted a two-day training of 25 civil protection officers in the area of Mine risk education (how to properly behave near suspected hazardous areas and avoid risky situations in various daily activities). This training was conducted by licensed instructors - employees of the Civil Protection Directorate.

Unfortunately, even with widely organized MRE activities in the Republic of Croatia, during 2019 there were accounted 2 mine incidents/accidents. During February 2019, in Karlovac County an AT mine was activated and one civilian had suffered heavy injuries. In addition, during July 2019, in Lika-Senj County, a deminer was injured and suffered heavy injuries during demining activities where AP mine PROM-1 had been activated.

Providing assistance to mine victims

The Republic of Croatia has developed public health care structure that includes clinics, clinical centres, specialized polyclinics, hospitals and rehabilitation centres. All persons being involved in the incidents are entitled to health protection and acquisition of orthopaedic aids to the amount covered by the Croatian Health Insurance Institute. These rights are regulated by a number of laws, rules and regulations. Relevant state administration authorities were involved in solving the problems of mine victims relating to medical rehabilitation.

All the relevant national wide mine action authorities and institutions continued to provide advisory support to mine victims and their families and to collect data on mine victims and their needs during the process of non-technical survey. Swiss-Croatian Cooperation Program through "Demining and Socio-economic Integration" project and correlated socio-economic component has a goal of establishing functional mine victims’ data base which will serve as a basis for developing further and strengthened policy actions for mine victims. The “Questionnaire on Mine Victims” has been finalized along with the public tender for the activities of collecting the data. The interviews of mine victims, which will then be used to fill in the database, are foreseen to begin in the first half of 2020.

The Republic of Croatia has highly developed legal framework relating to the persons with disabilities in realizing their legitimate rights and status. The status and various forms of rights are being realized through over 200 different laws and by-laws. There are 4 basic forms of mine victim assistance in which ministries, institutions, non-governmental sector, a number of organizations and individual initiatives take part in, such as medical care, physical rehabilitation, psychological help and social reintegration and professional and economic rehabilitation.

County institutes for emergency health care are available in all 21 counties which in turn provide even level of assistance in case of urgency. The time of response of emergency health teams (ambulances) in case of urgency (such as mine incident) has been improved and is now up to 10 min in urban areas and up to 20 min in rural areas (in 80% of situations). In cases of severe injuries or difficult medical conditions of any kind that require urgent transport of patient to a more equipped medical facility, helicopters of the Croatian Armed Forces are available and usually deployed. This in turn dramatically increases the level of survivability in such cases.

Psychosocial interdisciplinary centres are available in all 21 counties with four being regional centres for psychological services that provide psychotherapeutic services, with the main centre in the capital of Zagreb.

House of Croatian Veterans is accommodation / rehabilitation institution that can permanently or temporarily reside Homeland War veterans, returnees from the peacekeeping missions, injured deminers and members of their families, civilian war victims, as well as other persons in need (including mine/UXO victims and survivors), depending on their health status and socio-economic situation (for the
time being, one centre is operational and running with others in plan to opened).
AMENDED PROTOCOL II

Form E  
International technical information exchange, cooperation on mine clearance, technical cooperation and assistance

Article 13, paragraph 4 (e)  
“The High Contracting Parties shall provide annual reports to the Depositary […] on […]:
(e) measures taken on international technical information exchange, on international cooperation on mine clearance, and on technical cooperation and assistance;”

Remark:

High Contracting Party: THE REPUBLIC OF CROATIA

INTER NATIONAL TECHNICAL INFORMATION EXCHANGE:

During January 2019, representatives of the Libyan Ministry of Defense visited Civil Protection Directorate and HCR-CTRO. The Libyan delegation included four Ministry of Defense officials from the Directorate of Engineering, and representatives of the Libyan Embassy in the Republic of Croatia which have also participated in the talks about knowledge exchange in the field of Mine action.

In March 2019, a representative of HCR-CTRO participated in a Round Table on Humanitarian Mine Action Challenges and Best Practices in Teheran, Iran, organized by the Iranian Mine Action Centre and the International Committee of the Red Cross.

During April 2019, in Dubrovnik-Neretva County, in Slano, the 16th International Symposium "Mine Action 2019" was held in organization of the Ministry of the Interior (Civil Protection Directorate) and CROMAC-Center for Testing, Development and Training, Ltd. At the mentioned Symposium, some 150 participants from 31 countries of the world were exchanging knowledge about the relevant Mine Action topics.

Among other things, the representatives of the Civil Protection Directorate officials participated at the:
• the 9th Meeting of the States Parties to the Convention on Cluster Munitions (CCM), held in Geneva in September 2019.
• the Global Conference on Assistance to Victims of Anti-Personnel Mines and Other Explosive Remnants of War and Disability Rights held in September in Jordan
• the 4th Review Conference of States Parties to the Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-Personnel Mines and on their Destruction (APMBC), held in Oslo in late November 2019. This conference adopted the Oslo Action Plan 2020 - 2024, which accurately identifies the challenges ahead, while offering practical and applicable solutions for the implementation of the Convention.

In addition, Civil Protection Directorate officials continuously provided thorough support towards the international partners and organizations regarding the APMBC, CCM and CCW Conventions as well as Mine Action review (NPA), EU institutions Mine Action focal points and all other interested foreign Embassies and officials.
INTERNATIONAL COOPERATION ON MINE CLEARANCE:

n/a

TECHNICAL COOPERATION AND ASSISTANCE:

Based on the Agreement on the transfer of tasks, Article 2, signed between the Croatian Mine Action Centre and CRoMAC - Center for Testing, Development and Training (HCR-CTRO) on 30 October 2003, HCR-CTRO took over the activities and projects focused on testing of mine detection and mine clearance equipment, as well as research of new methods and technologies.

HCR-CTRO participates in a NATO SPS Project G5355 “Biological methods (bees) for explosive detection”, where it has a managing role. It is a three-year project which ends in November 2020. The project aims to develop innovative methods and technologies for detection of landmines. This will be achieved through advancement and integration of current state-of-the-art techniques, namely, trained bee colonies, in conjunction with organic semiconductor-based explosive vapour sensing films, UAVs with high-definition and thermal imaging cameras and image processing and analysis software. The combination of these two methods will enable passive sampling of an area to confirm the presence of explosive materials, but also active pinpointing of landmine locations.

In January 2019, HCR-CTRO held a training course for MRE instructors for representatives of the Serbian-Russian Humanitarian Center from Serbia.

During September 2019, HCR-CTRO held a training course for the staff of the Serbian-Russian Humanitarian Center and the Mine Action Center of Serbia. The training included planning, prioritization, project development and quality management in mine action.

During September 2019, the research team of the Faculty of Electrical Engineering and Computing, University of Zagreb (FER), in cooperation with Vallon GmbH, conducted field tests at the HCR-CTRO test site in Benkovac. The tests were carried out as part of the METASHAPE research project, funded by the UK's Sir Bobby Charlton Foundation. The aim of the project is to develop and implement advanced methods for recognizing the shape of buried metal objects using commercial metal detectors for use in humanitarian mine action.
AMENDED PROTOCOL II

Form G  Information to the UN-database on mine clearance

Article 11, paragraph 2, “2. Each High Contracting Party undertakes to provide information to the database on mine clearance established within the United Nations System, especially information concerning various means and technologies of mine clearance, and lists of experts, expert agencies or national points of contact on mine clearance.”

Remark:

High Contracting Party: **THE REPUBLIC OF CROATIA**

Reporting for time period from: **01/01/2019** to: **31/12/2019**

MEANS AND TECHNOLOGIES OF MINE CLEARANCE:

Mine clearance capacities included a complete equipment of 44 commercial demining companies that are authorized by Croatian Ministry of the Interior to perform mine clearance activities.

All the employees that work in mine clearance are wearing protective equipment that consists of flak jacket with protection for groins and helmets with visors. For special cases of UXO demolition, companies use ballistic suits. In the Republic of Croatia, mine clearance actions are mostly performed as a combination of mechanical demining, manual detection and mine-detection dogs (MDD).

LISTS OF EXPERTS AND EXPERT AGENCIES:

As of August 2018, the Government of the Republic of Croatia had issued a Conclusion to integrate some 54 government agencies, including CROMAC and GOMA, within existing State administration bodies. This meant CROMAC and GOMA ceased to exist as a legal entity/Government Office from 1 January 2019 and were integrated into the Ministry of the Interior. The intentions of this formal Conclusion were formalized through the Act on Amendments to the Act on Mine Action (OG No. 118/2018) and Act on amendment to the Act on the Government (OG No. 116/2018), enacted in December 2018, entered into force on 1 January 2019 where CROMAC became an operational sector within the Civil Protection Directorate – under the Ministry of the Interior.

CROMAC-CTRO Ltd continued in 2019 to conduct testing and certification of mine detection and mine clearance equipment; research and development of new mine detection and mine clearance methods and technology; and providing expert education and training in the field of mine action.

Throughout the 2019 there were 44 commercial companies that were authorized by the Ministry of the Interior and competed throughout the public tenders for mine clearance projects:
